

40mm MGL-140

MILKOR

USA INC.

Giving you the world's best 40x46mm multi-shot grenade launcher

TACTICAL FLEXIBILITY FOR TODAY'S WAR FIGHTER

The MGL-140 is a hand-held, semi-automatic, revolving action, and 40mm multi-shot grenade launcher providing a high volume of fire.

With the MGL-140 an operator can effectively cover a minimum area of 20 x 60 meters, it is deadly for pin-point targets at up to 150 meters with a maximum range of 400 meters. It is ideal to repel ambush attacks as all six (6) of its 40mm grenades can be fired in 3 seconds. The MGL-140 can be loaded with a variety of 40mm munitions for a specific mission. The operator can then select the desired round in the MGL-140 and fire without having to unload the weapon and thereby making it inoperable.

Tested and qualified according to MIL-STDs, the MGL-140 has been proven in crowd control, peacekeeping missions and in combat operations around the world. It is now manufactured in-, supplied and supported from the United States.

Milkor USA in conjunction with MEI, a supplier of high quality NATO Standard 40x46mm grenades, provides a comprehensive, accurate and unsurpassed weapon system.

The MGL-140 features a stainless steel frame and a Picatinny Sight Rail. The MGL's reflex sight compensates for the natural drift of the 40mm grenade. Range adjustment is quickly achieved on the indexed sight base. With full nighttime capability, the reflex sight also has a quadrant grid reticule that allows quick acquisition, impact adjustment and range estimation while maintaining sight picture.

The unique Quad rail forend accepts all MIL -STD-1913 rail accessories. It also features a collapsible, modular butt-stock, fitted with a recoil pad for stability and enhanced operational effectiveness.

With a chamber length of 140mm, the MGL-140 is designed for specialized non-lethal missions by peacekeeping forces, for crowd control operations and for police duties. It affords the warfighter maximum choice in tactical application since both lethal and non-lethal ammunition can be fired from the same launcher.
