NEGOTIATOR

Tactical Surveillance Robot

The Negotiator Tactical Surveillance Robot's primary purpose is to keep Police Officers, Soldiers, and other personnel from direct confrontation with potentially harmful or deadly situations. Terrorism poses a serious threat, requiring a serious response. The use of the Negotiator in counter-terrorism measures will save lives.

Robots have been desired for a long time, but high prices have always kept them out of reach. The Negotiator Tactical Surveillance Robot is the world's first economical, mass produced solution. Robotic FX has produced an easy to operate low cost tool for all types of applications.

Full motion video from up to 4 different internal cameras will be transmitted from the robot to the hand held Operator Control Unit (OCU). This coupled with two-way audio communication allows the operator to have remote eyes, ears and speech as well as full control over the vehicle's movement.

A wide range of payloads converts this versatile vehicle into a mission specific tool. The payload architecture has been designed to easily and quickly connect simple to complex payloads. The OCU's on screen display and menu buttons allow for easy access and control over these payloads. Some payloads include:

- Radiation detection
- Chemical and Biological agent detection
- Bomb sniffing and disposal
- Pan and tilt turret for weapon mounting
- Upward pointed camera for under car inspection
- FLIR and other specialty video and audio

The payload architecture will easily support anything you can dream up.

*Patents pending

*Pictured here with low profile antennas, and Night Vision Camera - IR Illumination System.

Dimensions: 25" X 15" X 7.5"

Weight: 20lbs.

Water Resistant

Max Speed (mph): 3.1

Base model kit includes:

- Negotiator Tactical Surveillance Robot
- Robot battery and charger
- Operator Control Unit
- OCU battery and charger
- High-resolution color video camera
- Two-way audio communication

The Negotiator is a robust, cost-effective solution available for immediate use in emergency situations. This affordable, compact system is the perfect addition to every police car and first-response vehicle.
